

# **The New Potatoe Culture as Developed by the Trench System, by the Judicious Use of Chemical Fertilizers, and by the Experiments Carried on at the Rural Grounds During the Past Fifteen Years (Paperback)**

Filesize: 9.71 MB

## **Reviews**

*It in one of the most popular publication. We have read through and that i am sure that i will likely to study again once more later on. I am just delighted to tell you that this is actually the finest publication we have read through in my individual existence and might be he best pdf for actually.*

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1891 Excerpt: .over. 9.68 CHAPTER X. Results of Planting Potatoes in Trenches of Different Depths. FIRST TRIALS. THE soil of these plots, naturally variable, was made exceedingly so by grading, the soil from the higher parts having been carted to the lower places. It is in some parts a sandy loam, in others a clay loam, and in still other parts a stiff brick-clay, all impoverished by years of cropping without any manure of any kind. These potato experiments were in previous years made on plots of notably uniform soil, so impoverished that anything short of a complete fertilizer failed to materially increase the crops. This was proven so conclusively that there seemed to be no reason why the trials should be continued upon them. The following exhibit, as might well have been anticipated from the variability of the soil, seems to show that the depth of planting should be governed by the character of the soil. At the rate of 800 pounds of Stockbridge potato fertilizer was sown in the trenches after the seed pieces were lightly covered. The trenches were three feet apart, measuring in this trial, as in every other, from the middle of each. Plot 21, 4 inches deep yielded 43-33 bushels per acre. 23. 348-33 27, 363.00 This gives an average, for four-inch deep planting, of 371.55 bushels to the acre. Plot 20, 8 inches deep yielded 385.00 bushels per acre. 22, 300.66 26, 355-66 29 311.66 This gives an average per acre,...
